

Take steps now to reduce your total network management costs.

LimeCare is our comprehensive approach to managing your network, using innovative tools that monitor vital network assets, report potential problems, and proactively maintain all systems. We take stock of your equip-

ment and applications, keep them up to date with the latest security updates, and make sure they are available when you need them. What does this mean for you? Costly network problems and downtime are all but eliminated.

For Your Staff

- Spam Filtering** Removes unwanted, unsolicited and malicious emails before they reach your mailbox.
- Priority Support** Reduces the time you have to wait for help – click the LimeLeap icon in your system tray and you'll be in touch with us.
- After Hours Support** Solves critical problems faster so you don't have to wait until the next business day.

For Your Organization

- Firewall Monitoring** Detects conditions that can lead to problems and errors reported by the device.
- Internet Monitoring** Detects Internet connectivity outages and abnormal usage.
- DNS Management** Reduces the time it takes to make changes to your Internet presence, such as moving a website, switching ISPs, or changing email servers.

LimeLeap's managed network service provides everything needed to make sure your network is there when you need it.

For Servers, Workstations & Laptops

Virus & Spyware Protection Prevents malicious software from attacking your computer, slowing it down, or collecting personal information.

Patch Deployment Keeps all your systems up to date with the latest security and functionality updates.

Disk Defrag Optimizes the performance of your hard drives so your data and system files are accessed as fast as possible.

Hardware & Software Auditing Gives you command of your assets and software licensing compliance.

Monitoring Detects situations that can lead to problems, like disks running low on space, high processor activity, and errors reported by the operating system.

Remote Support Agent Allows us to help you from afar just as if we were sitting next to you.

For Your Bottom Line

Monthly Reporting Documents the state of your infrastructure and proactive handling, for your board, executives and auditors.

Predictable Costs Spreads your systems maintenance costs evenly over time, and ultimately reduces total costs by eliminating the preventable causes of unexpected downtime.

Asset Management Lets you to keep track of your technology assets and schedule their replacement.

Eco-friendly IT Procedures Reduces your costs and impact on the environment by managing power and paper consumption, recycling equipment, and using other "green" practices.
